

# FireHawk™ Rescue Belt

## Emergency Egress for Firefighters

**MSA**  
The Safety Company

# MSA's exclusive Rescue Belt is YOUR latest SCBA safety feature.

Understanding that "protecting the protector" has been our calling for 90 years, MSA works hard to provide you with the most safety features available on any SCBA. The new **Rescue Belt** is another example of our emphasis on your safety.

The MSA Rescue Belt is an emergency egress system designed to help firefighters rappel to safety, should they become trapped in an upper-story of a building.

The Rescue Belt comes complete with the appropriate rappelling hardware and rescue line, and meets the NFPA 1983-2006 edition standard on Fire Service Life Safety Rope and System Components.

Designed for use as an integral part of any MSA MMR Air Mask (with Vulcan™, AirFrame, or M7 carrier and harness), it's the only system that meets both the NIOSH CBRN and NFPA 1981-2007 edition SCBA standards.

The complete system is capable of a 1,000 pound static load, exceeding the NFPA minimum requirement of 300 pounds. It is available in two waist sizes and two rescue line lengths.

The Rescue Belt can be ordered as an option on new SCBA or an individually sold component for upgrading your existing MSA SCBA.

## Ordering Information

### Description
